AUM was growing. Visibility wasn't.

A UAE-based alternative asset manager overseeing approximately AED 12B in AUM across Private Credit, Private Equity and Real Assets was managing portfolio, valuation, exposure, investor, accounting and risk data across fund administrators, custodians, portfolio systems, internal databases and spreadsheets.

AUM had increased 23% YoY and the number of funds expanded from 7 to 10. Performance stayed healthy, but visibility worsened as complexity grew: top-10 concentration rose from 31% to 37%, and teams frequently reconciled different versions of the same exposure and performance data.

EXECUTIVE ASKS

Which funds and strategies are generating returns, but increasing concentration, liquidity or reporting risk once exposures, valuation timing, leverage and cash requirements are considered?

DAOne connects the dots.

DAOne is a one-stop secure solution, configured and customized for your Data, Analytics and Reporting needs.

With DAOne, portfolio, fund-administration, valuation, accounting, investor and risk data was unified into one customized Data, Analytics and Reporting layer. The analysis showed that three funds accounted for 68% of the rise in concentration, 14% of records needed recurring manual reconciliation, and liquidity visibility differed across two strategies.

From insight to profitable action.
