FINTECH

From Fragmented Lending Data to Faster, Risk-Aware Decisions

UNIFIED DATA. SMARTER INSIGHTS.
STRONGER DECISIONS.

Growth was visible. Profitability wasn't.

A UAE-based digital lending and embedded-finance company serving consumers, SMEs and merchants across the GCC was managing growth across multiple systems for applications, KYC, credit decisioning, loan servicing, collections, CRM, fraud monitoring and finance.

Customer acquisition and disbursement volumes were growing, but management struggled to see the full economics of that growth. Approval rates had increased from 41% to 47%, while 30+ DPD delinquency rose from 5.8% to 7.1% and contribution margin fell from 14.2% to 11.9%.

EXECUTIVE ASKS

“Which products and customer cohorts are driving disbursement growth but weakening risk-adjusted profitability after credit losses, collections cost, CAC and funding cost?”

DAOne connects the dots.

DAOne is a one-stop secure solution, configured and customized for your Data, Analytics and Reporting needs.

With DAOne, fragmented lending, risk, collections, fraud, CRM and finance data was unified into one customized Data, Analytics and Reporting layer. The analysis showed that two customer cohorts accounted for 61% of the rise in delinquency, while acquisition cost had increased 19% and collections effectiveness had weakened in specific risk bands.

From insight to profitable action.
