

From Data to
Profitable Outcomes

ILLUSTRATIVE INDUSTRY CASE STUDY | UAE / GCC

HOSPITALITY

From Operational Complexity to Profitable Growth

UNIFIED DATA. SMARTER INSIGHTS.
STRONGER PERFORMANCE.

Growth was visible. Profitability wasn't.

A UAE-based hospitality group with multiple brands and 50+ properties across the GCC was generating approximately AED 1.6B in annual revenue. Despite strong occupancy growth of 20% YoY, net operating margin had declined from 12.4% to 9.1%.

The challenge was fragmented data across PMS, POS, F&B, CRM, loyalty, event management and finance systems, making it difficult to get a single view of performance across properties and brands. Manual reporting led to delays, inconsistencies and limited visibility into what was truly driving (or eroding) profitability.

EXECUTIVE ASKS

“Which properties, segments and channels are driving growth, and how can we optimize pricing, F&B performance and operational costs while improving guest satisfaction and margins?”

DAOne connects the dots.

DAOne is a one-stop secure solution, configured and customized for your Data, Analytics and Reporting needs.

It brings information from multiple data sources together, reconciles the underlying data and turns an executive question into answers, dashboards, tabular analysis and management reports — including your existing report formats.

The analysis highlighted that just three property-segment combinations were responsible for 68% of margin deterioration due to pricing inefficiencies, sub-optimal F&B mix and operating cost leakages.
