

From Data to
Profitable Outcomes

ILLUSTRATIVE INDUSTRY CASE STUDY | UAE / GCC

PAYMENTS

From Payment Volume Growth to Profitable Growth

UNIFIED DATA. SMARTER INSIGHTS.
STRONGER PERFORMANCE.

Growth was visible. Profitability wasn't.

A UAE-based payments business processing approximately AED 1.2B in annual TPV across merchant, acquiring and digital payment channels was growing 22% YoY. Yet net processing margin had declined from 3.1% to 2.4%.

The challenge was not a lack of data. It was fragmented information across gateway, processor, acquirer, fraud, chargeback, finance and merchant systems, making it difficult to connect volumes, pricing, interchange, fees, fraud losses, chargebacks and merchant performance into one trusted management view.

EXECUTIVE ASKS

“Which merchants, products and channels are driving higher TPV but reducing net margin after interchange, MDR leakage, fraud, chargebacks and acquiring costs?”

DAOne connects the dots.

DAOne is a one-stop secure solution, configured and customized for your Data, Analytics and Reporting needs.

It brings information from multiple data sources together, reconciles the underlying data and turns an executive question into answers, dashboards, tabular analysis and management reports — including your existing report formats.

The analysis highlighted that just three merchant-channel-product combinations were responsible for 61% of margin deterioration.

From insight to profitable action.
