

From Data to
Profitable Outcomes

ILLUSTRATIVE INDUSTRY CASE STUDY | UAE / GCC

RETAIL

From Data Complexity to Profitable Growth

UNIFIED DATA. SMARTER INSIGHTS.
STRONGER PERFORMANCE.

Growth was visible. Profitability wasn't.

A UAE-based retail group with multiple brands and 200+ stores across the GCC was generating approximately AED 2.1B in annual revenue. Despite strong topline growth of 18% YoY, net margin had declined from 6.8% to 4.1%.

The challenge was fragmented data across POS, e-commerce, inventory, CRM, loyalty and finance systems, making it difficult to get a single view of performance across channels, stores and product categories. Manual reporting led to delays, inconsistencies and limited visibility into what was truly driving (or eroding) profitability.

EXECUTIVE ASKS

“Which product categories, channels and stores are driving growth, and how can we reduce inventory leakage, markdowns and operating costs while improving margins?”

DAOne connects the dots.

DAOne is a one-stop secure solution, configured and customized for your Data, Analytics and Reporting needs.

It brings information from multiple data sources together, reconciles the underlying data and turns an executive question into answers, dashboards, tabular analysis and management reports — including your existing report formats.

The analysis highlighted that just three product categories and specific store clusters were responsible for 72% of margin deterioration due to overstocking, discounting and slow-moving inventory.

From insight to profitable action.
