

# REAL ESTATE

## Turning Fragmented Property & Investment Data into Portfolio-Level Performance Intelligence

UNIFIED DATA. SMARTER INSIGHTS.  
STRONGER DECISIONS.

### Revenue was growing. NOI wasn't.

A UAE-based real estate investment and operating platform managing approximately AED 7.2B in gross asset value across residential, office, retail, hospitality and mixed-use assets in the GCC was managing property operations, leasing, valuations, debt, CapEx, facilities and finance data across multiple disconnected systems.

Portfolio occupancy had improved from 86% to 90% and revenue was growing 14% YoY, yet portfolio NOI margin had declined from 60.8% to 56.9%. Management could see revenue growth — but not consistently determine which assets were actually creating economic value.

#### EXECUTIVE ASKS

*Which assets are growing revenue but reducing NOI and risk-adjusted returns after concessions, operating expenses, CapEx, financing costs and vacancy risk are considered?*

### DAOne connects the dots.

DAOne is a one-stop secure solution, configured and customized for your Data, Analytics and Reporting needs.

With DAOne, property-management, leasing, valuation, CapEx, debt, operating and finance data was unified into one customized Data, Analytics and Reporting layer. The analysis showed that four assets accounted for 71% of the portfolio's NOI-margin deterioration, while controllable operating expenses had increased 16% and CapEx exceeded plan by 23% across two assets.

## From insight to profitable action.
